Comment: Rating this horse as a low, moderate or high risk to develop lameness in one of the radiographed joints or areas I would rate this horse as a **low** risk.

Clinical examination: The clinical included heart, ophthalmic eye examination, teeth examination, limb flexion and joint palpation which were normal. The horse was examined at rest and at the walk. There was no evidence of previous abdominal surgery, infection or disease, lameness, laminitis or ataxia.

Yours sincerely,
